

Google Drive Summary — Last 3 Documents

Account: masroorkarim1967@gmail.com

1. Lecture 8 Task.pdf

Type: PDF | Owner: panaversity.org@gmail.com | Last viewed: Jul 6, 2026

An assignment brief on “Skills & Connectors” from the Agent Factory course. It asks students to complete 5 hands-on projects: building a personal AI Skill for a daily task, connecting one app read-only, and more — the goal being to learn how to package repeatable tasks into reusable Skills and safely connect AI to real data sources like Drive or Gmail.

2. Agentic-AI

Type: Google Slides (79 slides) | Owner: waniashah019@gmail.com | Last viewed: Jul 4, 2026

A beginner-friendly presentation on the AI Revolution and Agentic AI. Covers what makes AI “agentic” (planning, tool use, self-correction, goal completion), the idea that agents are becoming the new “operating layer” replacing traditional apps/SaaS/PCs, and includes real-world analogies (e.g., regular AI as a waiter vs. agentic AI as a personal chef) plus references to a “10-80-10 rhythm” and 7 principles of agent problem-solving.

3. Skills & Connectors: Teach AI Once, Connect It to Your Apps

Type: Google Slides (26 slides) | Owner: mr.junaidshaukat@gmail.com | Last viewed: Jul 4, 2026

A no-code crash course explaining Skills (reusable “recipe cards” of instructions) vs. Connectors (safe access to your real apps, like a stocked kitchen). Covers how Skills load automatically in Claude.ai, built-in skills (Word, PowerPoint, Excel, PDF), and how to connect apps in about a minute.

Pattern

All three documents are course/study materials related to the same “AI Agent Factory” curriculum on Skills & Connectors — it looks like this reflects ongoing coursework.
